# Language as a Sense

Re-seeing the Subjective / Objective Divide

Emotional proof for Humanizer.com's foundational paradigm

# The Illusion of the Objective

*We live in a linguistic hallucination*

- Language offers the sense of a shared, "objective" world
- But meaning is formed in consciousness
- The illusion is powerful, emotionally embedded

# Three Realms of Existence

## Corporeal / Physical

That which can be  
sensed and measured.  
The unnamable  
substrate of reality.

## Objective / Symbolic

Shared abstractions:  
words, mathematics,  
institutions, and social  
codes.

## Subjective / Conscious

The lived experience  
of "now." Intention, will,  
and presence.

*Only the third realm is truly "lived" — the others are supports or mediations*

# Phenomenology

*Field of the Lifeworld*

| *"Everything is given in lived experience."*

- Husserl's epoché & reduction
- The "lifeworld" prior to abstraction
- Consciousness first, then objects

Language is an artifact built on top of the lifeworld

# Emptiness / Dependent Origination

## śūnyatā (emptiness)

- Nāgārjuna: no inherent existence
- All phenomena arise dependently
- Even "objects" are relational constructs

From emptiness to the non-ontological status of symbolic artifacts

# Deconstruction & différance

*Meaning is deferred*

- Derrida: language never "present"
- Signifiers reference other signifiers
- The trace of absence always present

Language is inherently self-referential and unstable, not a stable ontology

# QBism & Agent-Centered Reality

Quantum states = beliefs

- QBism reframes quantum mechanics as personal Bayesian updates
- There is no observer-independent wavefunction
- Reality is participatory

Language is also belief, not objective signal

# Neural / Agent Allegory

**Neurons**

↔ Agents in a Field of Agency - Consciousness

**Weights**

↔ Belief Connections Between Agents

**Hidden layers**

↔ Latent Structures of Meaning (Map states)

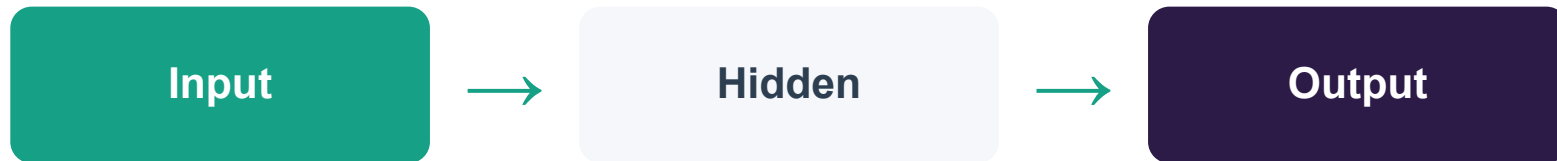

**Backpropagation**

↔ Belief Revision and Self-Reflection (Learning)

*Neural networks as metaphor (not substrate) for networks of meaning as experienced by consciousness*

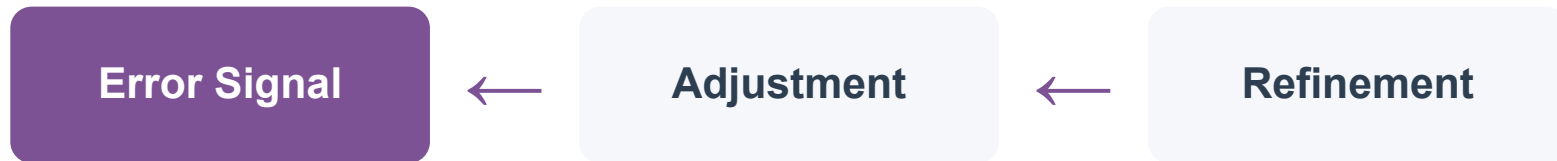

# Forward Pass = Perception

- Input = Sensory / Linguistic Stimulation
- Hidden Activations = Latent Associations
- Output = Constructed Meaning

*The symbolic "objective world" is processed through the same belief framework as our natural physical senses*

# Backpropagation = Reflection

- Prediction error as mismatch in expectation
- Weight updates as internal reconfiguration
- Consciousness as recursive correction mechanism

*Human self-reflection corrects the "map" of language through consciousness to an unconscious instinct. That is learning.*

# The Emotional Belief Loop

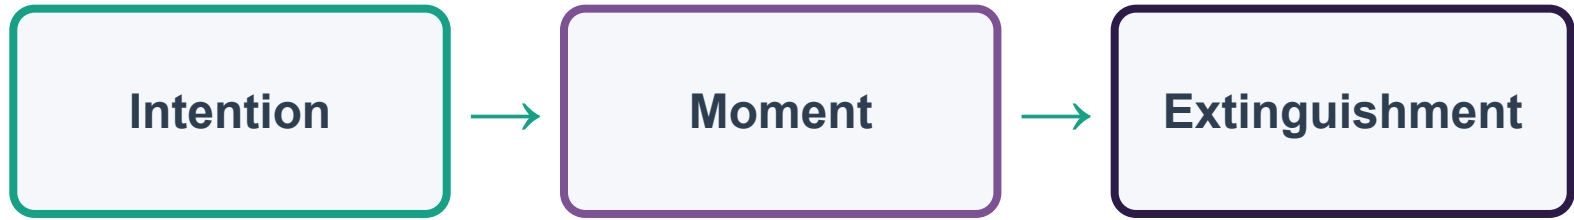

- Words trigger visceral reactions
- Emotional weighting reinforces belief in "objective truth"
- The loop entangles subject and object

**Language feels real**

# The Time-Being

## Intention, Will, Moment

- A moment is willed into being
- Then it collapses back into emptiness
- The next moment re-asserts existence

*The phenomenology of "now," not continuous flow*

# Paradox of Existence

Existence arises out of non-existence,

moment by moment

- Every moment is born from emptiness
- But emptiness is not a void—it is possibility
- The paradox: being and non-being co-emerge

# humanizer.com The Intention

- The allegory engine as transformation between taxonomies
- Narrative interface that surfaces the subjective core
- We aspire to evoke insight from you, and remind you now and then the paraox of all insights.

**Goal: Shift users from linguistic identification to self-awareness**

# Witness your own subjective agency

Bridging theory to experiential shift

Reflect on a single word. Feel its "weight."  
Then dissolve it into silence.

# Summary

**Three realms:** Corporeal, Objective, Subjective

**Emotional proof:** Language feels real through visceral belief

**The Time-Being:** Discrete moments of intention and will

**Interface goal:** Awaken subjective agency
